TARDIS

The Social Network & Financial OS for Solana Seeker

Superteam

Solana Ecosystem Grant

Seeker-Native

Hardware-First Platform

WHAT IS TARDIS?

Seeker is Solana's flagship smartphone — hardware purpose-built for Web3. Tardis is the social network that connects every Seeker user in one sovereign, on-chain ecosystem.

Built for One Device. The Seeker.

Tardis runs exclusively on Solana's Seeker phone — a hardware-first social platform, not another app competing for attention.

A Social Network with On-Chain Identity

Every user is their .skr identity — a wallet, a username, and a reputation score, all in one. Posts and messages are cryptographically signed by the device.

Social Media + Finance in One Interface

Threads, DMs, communities, tipping, trading, lending — Tardis is the complete OS layer for how Seeker users communicate and transact.

THE PROBLEM

Seeker Users Have No Home.

Web2 social platforms were built for everyone — and serve no one in Web3.

Bots Everywhere

No Web2 platform can prove a post was made by a human. Every feed is polluted — bots, fake wallets, coordinated manipulation.

Identity is Broken

Your Twitter handle has nothing to do with your wallet. There's no unified on-chain identity connecting social presence and financial reputation.

Finance is Fragmented

Tipping, trading, lending — all on separate apps. Every action breaks the conversation. Seeker users deserve better UX than tab-switching.

No Privacy Guarantee

Centralized servers own your messages. No hardware-level security. No ZK encryption. Your private conversations are not actually private.

THE SOLUTION

One App. Every Seeker User. On-Chain.

.skr Identity

Hardware-signed on-chain identity. Your wallet IS your profile.

Social & Messaging

Public feeds, threads, DMs — all human-verified, zero bots.

Gated Communities

Token-gated groups. Curated by SOL, $SKR, or any SPL token.

Embedded DeFi

Tip, lend, escrow and trade — without leaving the conversation.

Reimagine AI

Natural language on-chain execution and real-time alpha.

The Social Layer for Seeker.

Tardis is the default social home for every Seeker owner — a network where identity, reputation, and community are all verifiable on-chain from day one.

Threads & Public Feed

Post, reply, and share in a public feed. Every post hardware-signed — no bots, no fakes, ever.

ZK Encrypted DMs

Private 1-to-1 messaging with end-to-end encryption. Signed by your Seed Vault, owned by no server.

Token-Gated Communities

Create communities gated by any SPL token. Define the minimum balance. Pure signal, no noise.

100% Human Verified

Hardware attestation means every account is backed by a real Seeker device. The bot problem is solved at the protocol level.

INTEGRATED DEFI

Finance Happens Inside the Conversation.

No app switching. No copy-pasting addresses. Your chat thread is your financial terminal.

Instant Tipping

Send $SOL, $SKR, or any SPL token inside a DM or group thread. Zero friction, instant settlement.

P2P Lending

Trustless 1-to-1 lending secured by PDA-based collateral escrow and automated liquidation logic.

In-App Escrow

Custom escrow triggers for OTC trades or service payments. Funds release only on agreed conditions.

Pump.fun Suite

Launch tokens, watch bonding curve livestreams, and trade — without ever leaving the Tardis interface.

The Grok of Solana.

Solana Agent Kit

Reimagine lives inside Tardis. It analyzes on-chain data, executes trades on command, and surfaces alpha in real time — without ever leaving the app.

01 Natural Language Execution

"Swap 2 SOL for $SKR if price drops 5%" — executed instantly.

02 Portfolio Intelligence

Live PnL tracking, rug-pull risk scores, and yield opportunity alerts.

03 On-Chain Sentiment Alpha

Monitors ecosystem activity to surface trending tokens before the crowd.

04 Conditional Automation

Set triggers and walk away. Reimagine executes when your conditions are met.

The Currency of the Seeker Ecosystem.

$SKR

Fee Discounts

Reduced fees on all P2P lending and escrow transactions.

Premium Reimagine

Unlock advanced AI features, conditional triggers, and deeper portfolio intelligence.

Node Staking

Stake $SKR to secure messaging relay nodes and earn staking rewards.

Community Gating

Required to create token-gated communities. Holds the quality bar for the ecosystem.

TECHNICAL ARCHITECTURE

Secure by Design. Sovereign by Default.

HARDWARE LAYER	Seeker Seed Vault · Hardware Attestation · .skr Identity Signing
PROTOCOL LAYER	Solana Virtual Machine · Program Derived Addresses · Smart Contracts
AI LAYER	Reimagine · Solana Agent Kit · On-Chain Sentiment Engine
STORAGE LAYER	Shadow Drive / Iridium · Decentralized · Censorship-Resistant
APPLICATION LAYER	Tardis Social · DeFi Terminal · Pump.fun Suite · $SKR Governance

GRANT ASK

Partner With Us to Build the Future.

This grant accelerates Tardis from funded prototype to the definitive social and financial OS for every Seeker owner worldwide.

GRANT ALLOCATION

AI & Reimagine Development	30%
DeFi Protocol Security Audits	25%
Mobile UX & Seeker Integration	20%
Community & Ecosystem Growth	15%
Infrastructure & Storage	10%

TARDIS

The Social Network & Financial OS

for Solana Seeker

Hardware-Attested · Bot-Free · Sovereign Identity

Social Media + DeFi + AI — One Seeker App

LET'S BUILD TOGETHER
