

TARDIS

The Social-Financial OS for Solana

Unlimited Communication · Limitless On-Chain Execution

Seeker

Telegram

WhatsApp

X (Twitter)

Mobile App

Powered by Solana

WHAT IS TARDIS?

One App. Every Platform. Everything On-Chain.

Tardis is the Social Network and Financial OS for Solana connecting every user across Seeker, Telegram, WhatsApp, X, and Mobile with seamless DeFi built into every conversation.

Social + Finance in One Interface

Threads, DMs, communities, tipping, trading, lending the complete OS for how Solana users communicate and transact.

On-Chain Identity Everywhere

Every user gets a .skr or .sol identity a wallet, username, and reputation score accessible on any platform.

Access From Anywhere

Use Tardis on Seeker (Solana Mobile device), Telegram groups, WhatsApp DMs, X mentions, or the standalone mobile app (iOS & Android).

THE PROBLEM

Current Social Finance is Broken.

Finance is Fragmented

Tipping, trading, lending all on separate apps. Every financial action breaks the conversation and forces an interface switch.

Static Social, Disconnected Liquidity

Social media is read-only for finance. The gap between seeing alpha and executing a trade causes massive drop-off in user intent.

Identity is Broken

Your social handle has nothing to do with your wallet. No unified on-chain identity connects social presence and financial reputation.

THE SOLUTION

One App. Every Platform. Everything On-Chain.

.skr / .sol Identity

Hardware-signed on-chain identity. Your wallet IS your profile and reputation.

Social & Messaging

Public feeds, threads, Audio & Video Chat, ZK-encrypted DMs. Zero bots, human-verified.

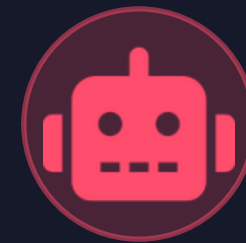

Gated Communities

Token-gated groups curated by SOL, SKR, or any SPL token. Pure signal, no noise.

Embedded DeFi

Tip, P2P lend, escrow and trade without leaving the conversation.

Reimagine AI

Natural language on-chain execution and real-time alpha. The Grok of Solana.

PLATFORM ACCESS

Tardis Works Wherever You Are.

No device lock-in. No platform walls. One financial OS everywhere.

Mobile App (Seeker Device)

Tardis with The premium Solana Mobile experience. Hardware-signed transactions via Seed Vault key custody and SGT. Maximum trust, same app.

Telegram

Full-featured bot in private chats AND groups. Public/Private Tip, lend, borrow, swap right in your group conversations.

WhatsApp

Tardis AI Copilot in WhatsApp for interactive DeFi actions. Public/Private Tip, lend, borrow, swap using natural language.

X (Twitter)

Public reputation layer. Tip via mention, share trades, post rep scores. Every action is organic marketing.

Mobile App (Non Seeker)

Full app for non seeker users who want the richest experience outside telegram, whatsapp or x. All features, any device.

★ **Telegram Groups: Tip, lend, borrow & earn yield with your community right inside your group chat. Bot joins, listens, executes.**

SOCIAL PLATFORM

The Social Layer for Solana.

Tardis Mobile is the default social home for every Solana user. where identity, reputation, and community are all verifiable on-chain from day one.

DeFi

Public/Private Tip, lend, borrow, swap right in your group conversations. with Reimagine AI using Natural Language

Threads & Public Feed

Post, reply, share. Every post hardware-signed no bots, no fakes, ever.

ZK Encrypted DMs

Private 1-to-1 messaging with end-to-end encryption. Signed by Seed Vault, owned by no server.

Token-Gated Communities

Create communities gated by any SPL token. Define minimum balance. Pure signal.

100% Human Verified

Hardware attestation means every account is backed by a real device. Bot problem solved at protocol level.

Finance Happens Inside the Conversation.

No app switching. No copy-pasting addresses. Your chat thread is your financial terminal.

Instant Tipping

Send USDC, USDT, SOL, SKR, or any SPL token inside a DM or group thread. Zero friction, instant settlement.

Pump.fun Suite

Launch tokens, watch bonding curve livestreams, and trade without ever leaving Tardis.

P2P Lending

Trustless 1-to-1 lending secured by PDA-based collateral escrow and automated liquidation logic.

Earn / Yields

Access Solend, Kamino, Marginfi yields directly. Best rate comparison and one-tap deposit.

In-App Escrow

Custom escrow triggers for OTC trades or service payments. Funds release only on agreed conditions.

Token Swap

Make public/private Swap any SPL token from any platform, any device(Tardis mobile, Telegram, Whatsapp, X)

DeFi Lives Inside Your Community.

How It Works in Telegram Groups

Ahmed:

@TardisBot tip @Fatima 5 USDC

TardisBot ✓:

Done! Ahmed → Fatima | 5 USDC sent. Rep updated.

Ahmed:

@TardisBot offer 100 USDC | 7 days | 5% interest

Fatima:

@TardisBot borrow from @Ahmed

TardisBot ✓:

Match! Fatima borrowed 100 USDC from Ahmed. Due May 14.

The Golden Rules

Always Individual Wallets

No group wallet. Every tip/loan goes wallet-to-wallet. The group is just the interface.

Privacy by Default

Balances & history stay in DMs. Groups only see action results not your portfolio.

Spending Limits

Pre-approve small amounts (≤ 20 USDC) for instant group execution. Larger amounts route to DM confirmation.

Viral Onboarding

New users tipped in a group get 48hr to DM the bot and claim funds pulled in by receiving money.

REIMAGINE AI

The Grok of Solana.

Solana Agent

Reimagine lives inside Tardis . It analyzes on-chain data, executes trades on command, and surfaces alpha in real time without ever leaving the app.

01 Natural Language Execution

"Swap 2 SOL for SKR if price drops 5%". executed instantly.

02 Portfolio Intelligence

Live PnL tracking, rug-pull risk scores, and yield opportunity alerts.

03 On-Chain Sentiment Alpha

Monitors ecosystem activity to surface trending tokens before the crowd.

04 Conditional Automation

Set triggers and walk away. Reimagine executes when your conditions are met.

OUR MOAT

Why Tardis is Defensible.

Multi-Platform Network Effect

Every user added across Telegram, WhatsApp, X, and Seeker makes the network more valuable for all, a flywheel no single-platform competitor can replicate.

Portable On-Chain Identity

.skr / .sol identity ties wallet, reputation, and social presence into one address, sticky data no competitor can easily port or copy.

Embedded DeFi Switching Cost

Finance woven into conversations creates daily habits. Users who tip, lend, and swap inside their chats have no reason to leave for a separate app.

SKR Token Economy

Fee discounts, staking, and community gating create token demand loops that align user incentives and raise the cost of switching to any alternative.

100% Human-Verified Network

Hardware attestation via Seed Vault eliminates bots at the protocol level a trust guarantee that centralized social platforms structurally cannot match.

Reimagine AI

Reimagine AI can trade, swap, tip, transfer and even find and invest for user to earn yields using natural language

Three Phases. One Mission.

01

Months 1–3

Telegram Beachhead

- Launch Telegram bot with Privy wallet integration
- Connect existing Phantom / Magic wallets in 1 tap
- Group tipping, P2P lending, swap, yield in Telegram
- Target: crypto-native trading & community groups
- Goal: 10K active wallets, \$500K TVL

02

Months 3–6

WhatsApp + Mobile Expansion

- Extend 1:1 DeFi assistant to WhatsApp (Flows API)
- Launch standalone Mobile App (iOS + Android)
- X reputation layer + mention-based tips go live
- Target: mainstream users, diaspora remittance groups
- Goal: 100K MAU, \$5M TVL

03

Months 6–12+

Seeker + Ecosystem Dominance

- Seeker (Solana Mobile) full integration
- Full Reimagine AI launch with conditional automation
- SOL and SKR staking
- Target: become default social layer for all Solana users
- Goal: 1M+ MAU, \$100M+ TVL

The Currency of the Tardis Ecosystem.

How Tardis Makes Money

Transaction Fees Small % on swaps, tips, P2P lending & escrow

Premium Reimagine AI Subscription for advanced AI features & automation

Node Staking Revenue Protocol cut from \$SKR staking rewards

Community Gating Fees Fees required to create & manage token-gated groups

\$SKR

Fee Discounts

Reduced fees on all P2P lending and escrow transactions for \$SKR holders.

Premium Reimagine

Unlock advanced AI features, conditional triggers, and deeper portfolio intelligence.

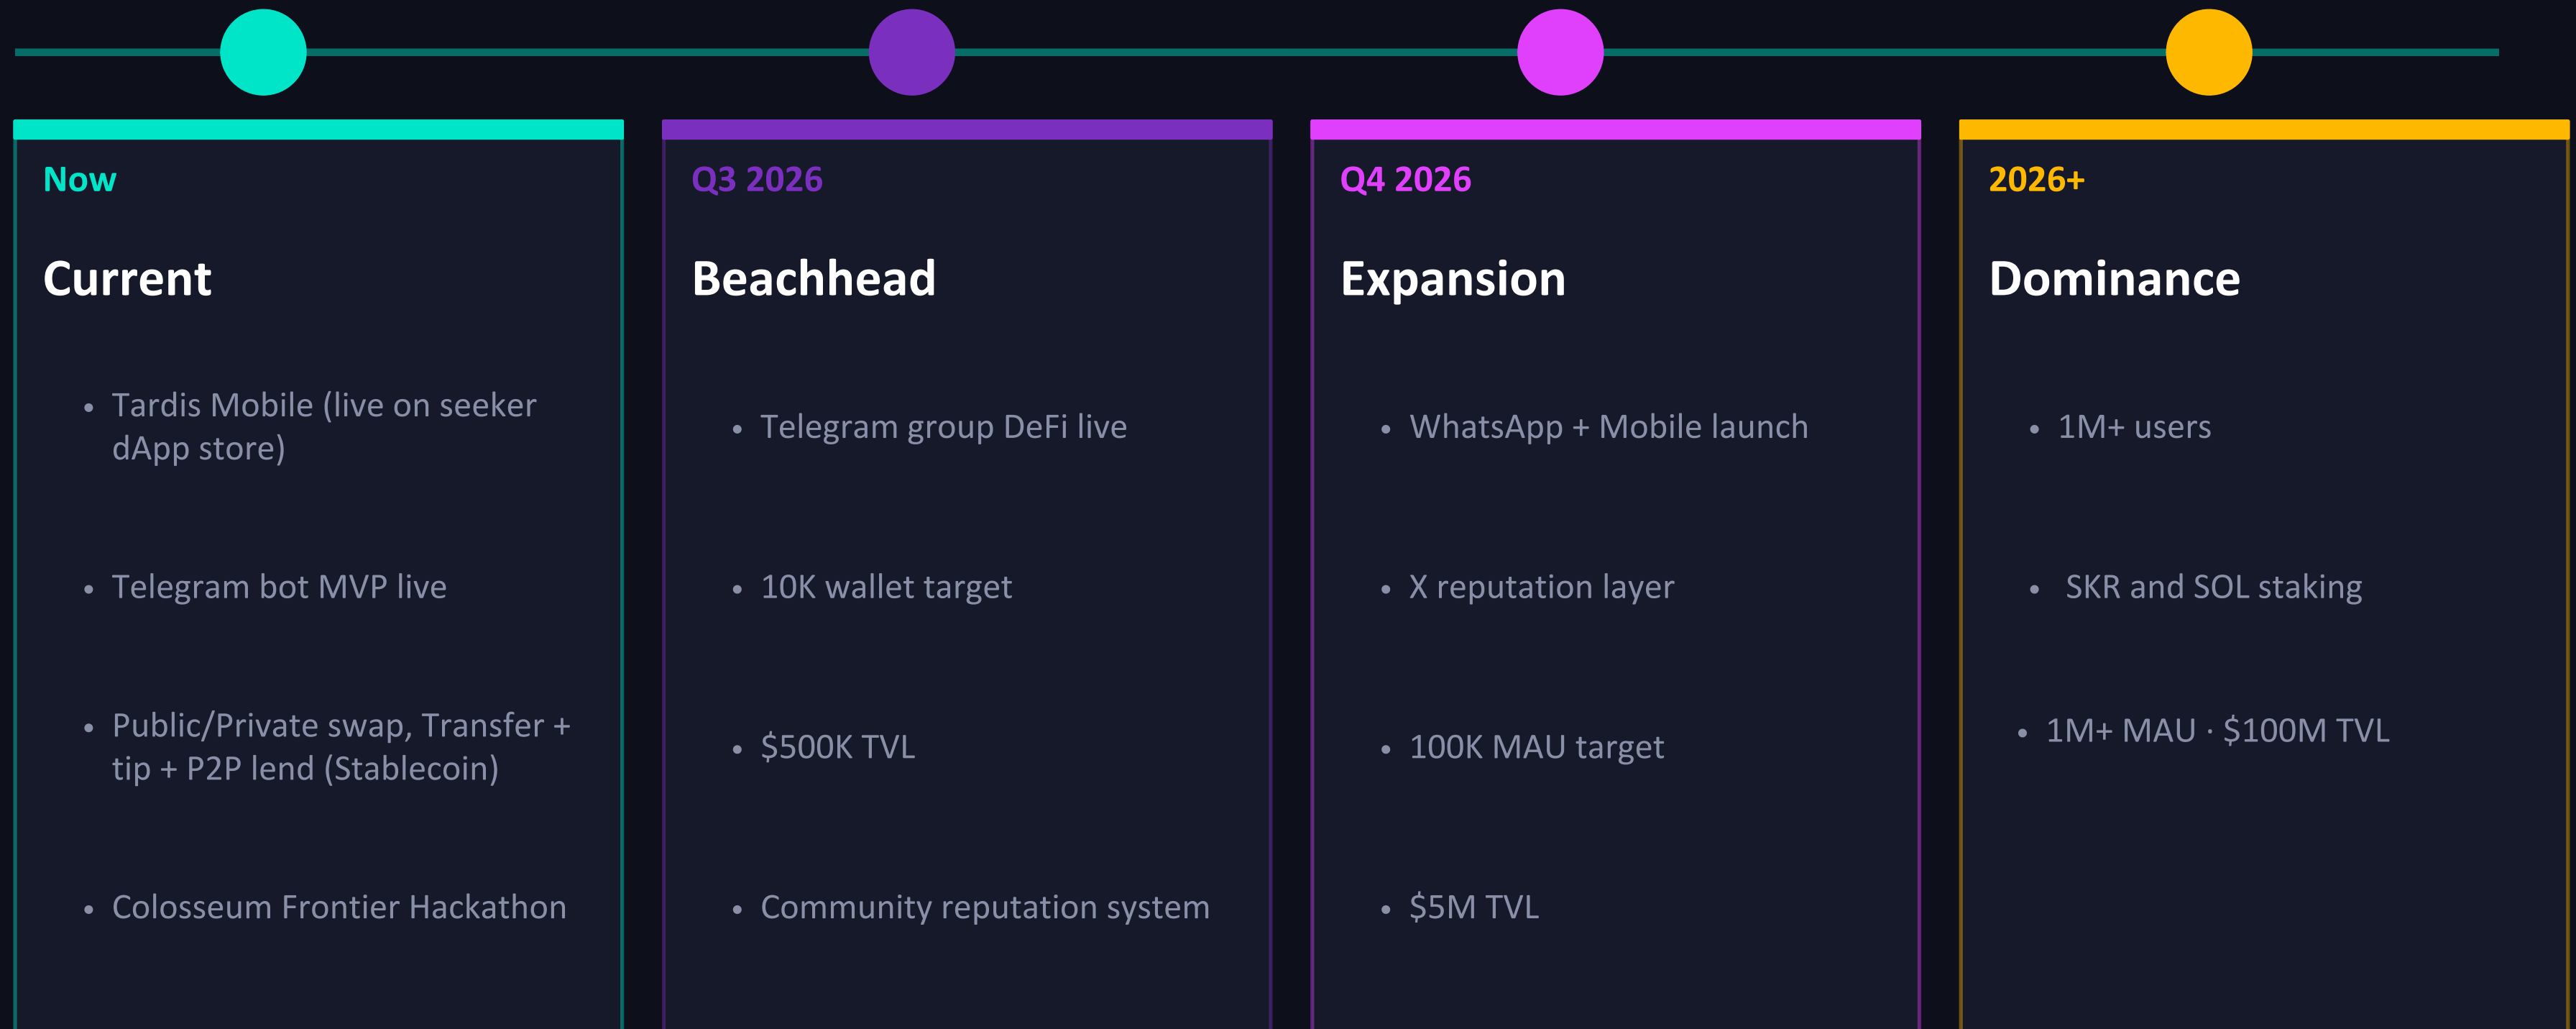

Node Staking

Stake SKR and SOL to earn staking rewards.

Community Gating

Fees Required to create token-gated communities. Holds the quality bar for the ecosystem.

Milestones, Targets & Future Plans.

We're Not Competing. We're Combining.

Competitor	What They Do	Their Limit	Tardis Advantage
Phantom	Wallet	Single wallet, no DeFi app layer	Multi-wallet + full DeFi OS on top
Aave / Solend	Lending Protocol	Requires wallet to start, no social	Lending inside chat with social accountability
Uniswap / Jupiter	Swaps	Requires wallet, no conversation layer	Swap from Telegram group in 1 command
Friend.tech	Social + tokens	Web-only, no DeFi execution layer	Group finance + AI + multi-platform

Tardis = Social Network + DeFi OS + AI Agent + Multi-Platform. No single competitor does all four.

Meet the Team

Precious Samuel

Founder & Developer

Solana developer building the full-stack DeFi + social architecture.

Rienne Prince

Co-Founder & Security Auditor

Security architect ensuring protocol-level safety across all DeFi interactions.
